PROFESSIONAL SUMMARY

QA Automation Engineer with internship experience at Larsen & Toubro, where I built Playwright & Selenium frameworks integrated with CI/CD that reduced regression testing time by 40%. Skilled in test planning, design, execution, failure analysis, and defect lifecycle management across Agile sprints. Passionate about building scalable test automation and transitioning into model-based testing with Tricentis TOSCA.

WORK EXPERIENCE

Automation Test Engineer Intern | Feb 2025 – May 2025

Larsen & Toubro · Chennai

Tech Stack: Playwright, Selenium, Java, Cucumber, Jenkins, Git

- Built automated test scripts using Playwright and Selenium, covering 80+ user journeys across login flows, form submissions, and UI-critical paths
- Developed data-driven tests with Cucumber BDD and reusable page objects, keeping the framework easy to maintain across sprint changes
- Hooked the suite into CI/CD, cutting regression testing time by ~40% and removing most manual smoke checks before each release
- Ran structured failure analysis on failing test runs, documented root causes, and raised defect reports through the team's incident management process
- Joined Agile ceremonies and flagged automation coverage gaps before regression cycles, reducing last-minute test blockers significantly
- Studied Tricentis TOSCA model-based testing alongside active project work as part of ongoing self-directed learning

TECHNICAL SKILLS

Automation: Selenium WebDriver, Playwright, Cucumber BDD, TestNG / JUnit, Tricentis TOSCA (Learning)

Languages: Java, JavaScript, TypeScript, HTML, CSS

API & Database: REST API Testing, Postman, JSON Validation, SQL (MySQL)

Framework & Practices: Page Object Model, Data-Driven Testing, BDD, Test Planning, Defect Lifecycle

DevOps & Tools: Git, GitHub, Jenkins, Maven, CI/CD Pipelines

Methodologies: Agile / Scrum, SDLC / STLC, Cross-Browser, Regression & Smoke Testing

CERTIFICATIONS

- Tricentis TOSCA Automation Specialist — In Progress (2026)
- Larsen & Toubro – Automation Testing Internship Certificate (2025)

PROJECTS

Web Application Automation Framework

- Designed a reusable Playwright/Selenium framework running smoke and regression suites independently across dev, staging, and production
- Executed 100+ automated test runs weekly across environments, catching defects 3x faster than manual cycles
- Tracked trends across 3+ sprints; identified a recurring timeout defect that pointed to a backend latency issue, resolved after developer review

E-Commerce Application Automation Testing

- Automated 25+ checkout scenarios covering promo codes, out-of-stock handling, and payment edge cases routinely missed during manual testing
- Cross-browser runs on Chrome, Firefox, and Edge surfaced 3 layout regressions not caught by the existing unit test suite

Employee Management System — Automation Testing

- Validated CRUD operations end-to-end with SQL assertions against the live database, ensuring backend and UI stayed in sync
- Integrated the suite into GitHub Actions to run on every pull request — caught 5 regressions before they reached the main branch

EDUCATION

Sri Venkateshwaraa College of Engineering & Technology

B.Tech — Computer Science and Engineering · 2021–2025 | Puducherry, India

Jawahar Higher Secondary School

Class XII (Senior Secondary) · 2020–2021 | Puducherry, India

Jawahar Higher Secondary School

Class X (Secondary School) · 2018–2019 | Puducherry, India
